DETAILED ACTION

Introduction

1. Claim 1-39 of U.S. application 09/577,655 filed on 01-20-2000 are presented for examination.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S. C. 121:

I. Claims 1-15, drawn to Hearing aid, electrical having a small ambient sound reproducing system wherein an output transducer transmits directly into the ear or skull for use by the hard of hearing to increase the sound level received by the ear, classified in class 381, subclass 312.

II. Claims 16-31, drawn to testing of hearing aid. A hearing aid is a small audio reproducing system for the head of hearing which at least part of hearing aid is tested, classified in class 381, subclass 60.

III. Claims 32-39, drawn to Programming interface circuitry which is including circuitry within the hearing aid or external to the hearing aid for connection to the hearing aid in order to program it, classified in class 381, subclass 314.

3. Inventions I and II. III. are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as Hearing aid electrical / Testing of hearing, Programming interface circuitry. See MPEP § 806.05(d).

Art Unit: 2643

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
